EDUCATION

University of Ghana

BSc. Information Technology | Second-Class Upper Honours (3.44/4.00)

Accra, Ghana

Jan 2024 – Sep 2027 (Expected)

Relevant Courses: Data Structures & Algorithms I & II (A), Software Engineering (A), Introduction to Artificial Intelligence, Cloud Computing, Information Security Management, Mobile Application Development, Computer Networks

CERTIFICATIONS

AWS Certified Cloud Practitioner | Amazon Web Services

2026

Credential ID: d8670653cc9347cf8705058247ae5e1e | Cloud infrastructure, security, and pricing models.

PROFESSIONAL EXPERIENCE

Aurora Software Labs

Accra, Ghana

Lead Software Engineer

Apr 2025 – Present

- Led a cross-functional engineering team of 8, enforcing secure coding standards, agile delivery practices, and CI/CD workflows, with a focus on application resiliency and stability in production environments.
- Architected and delivered a production-ready secure e-voting platform under strict timelines, designing scalable backend systems with data integrity, access control, and fault tolerance as primary constraints.
- Applied modern tooling and automation across the full software development life cycle, improving delivery consistency and reducing manual toil across concurrent projects.

Turntabl

Accra, Ghana

Software Engineering Intern

Jul 2025 – Sep 2025

- Built and optimised the frontend interface for Whisperbox using React and TypeScript, delivering a production-ready web experience with RESTful API integration and a focus on reliability and performance.
- Led a sub-team of 3 interns on feature implementation and code reviews in a fast-paced, collaborative agile environment.

PROJECTS

ShopAurora (shopaurora.africa) | Africa-First Social Commerce Platform

2024 – Present

- Built and launched a live e-commerce platform creating real-world impact for 82 merchants across Ghana, with real-time payment processing via Pystack, SQL-backed transaction management, and graceful failure recovery.
- Identified and resolved a critical product issue around payment trust by rolling back a commission-split feature, demonstrating sound engineering judgment and ownership in an ambiguous product scenario.

Geniy (geniy-frontend.vercel.app) | AI-Powered Research Platform

2024 – Present

- Engineered a multi-tenant Node.js/Express REST API on AWS RDS PostgreSQL with AES-256 encryption and PII stripping at the architectural level, treating cybersecurity as a core design constraint rather than an afterthought.
- Reduced AI inference latency by ~60% through pipeline optimisation, achieving sub-200ms API response times at scale across 30+ workspaces serving 25+ users.
- Leveraged AI development tools throughout the build, critically validating outputs through peer review and automated testing before shipping to production.

Artifact | AI Code-to-PR Platform (In Development)

2025 – Present

- Engineering an end-to-end TypeScript pipeline (prompt to multi-file diff to commit to PR) using GitHub APIs and LLM orchestration, applying responsible AI practices and CI-ready delivery workflows throughout.

AWARDS & ACHIEVEMENTS

2nd Place | COMPSSA x Alle-AI Hackathon

2025

Built Orbit, an AI-powered campus networking app using GPT-4o for student matchmaking and icebreaker generation, competing against university teams across Ghana.

SKILLS

Languages: TypeScript, Python, JavaScript, Java

Backend & Data: Node.js, Express, PostgreSQL, SQL, MongoDB, Prisma, AWS RDS, REST APIs, relational databases

Frontend & Mobile: React, React Native, Expo, TypeScript, HTML, CSS

Cloud & Security: AWS (EC2, RDS, S3), AES-256 encryption, PII handling, cybersecurity principles, cloud technologies

AI & Automation: LLM integration (OpenAI, OpenRouter), responsible AI practices, AI-assisted development, machine learning exposure

Tools & Practices: Git, GitHub, Agile/Scrum, CI/CD, software development life cycle, code reviews, modern tooling
